Contents

No. 1 (February 1977)

PAGE

Relationships between blood composition and fertility in dairy cows – a field study. G. J. Rowlands, W. Little and B. A. Kitchenham . . . 1

Influence of age, dietary protein and weaning on calf abomasal enzymic secretion. P. Garnot, R. Toullec, J.-L. Thapon, P. Martin, Minh-Thu Hoang, C.-M. Mathieu and B. Ribadeau-Dumas 9

A method of diagnosing intramammary infection in dairy cows for large experiments. T. K. Griffin, F. H. Dodd, F. K. Neave, D. R. Westgarth, R. G. Kingwell and C. D. Wilson 25

Disinfection properties of some bovine teat dips. J. S. King, F. K. Neave and D. R. Westgarth 47

Studies on milk yield and composition of the West African dwarf goat in Nigeria. A. O. Akinsoyinu, A. U. Mba and F. O. Olubajo . . . 57

Fractionation of whole casein on hydroxyapatite. Application to a buffalo κ-casein. F. Addeo, J.-M. Chobert and B. Ribadeau-Dumas . . 63

Isoelectric focusing of milk-clotting enzymes. P. G. Righetti, B. M. Molinari and G. Molinari 69

Quantification of milk-clotting enzymes in 40 commercial bovine rennets, comparing rocket immunoelectrophoresis with an activity ratio assay. G. A. L. Rothe, M. J. Harboe and S. C. Martiny 73

The potential application of the theory of branching processes to the association of milk protein. T. G. Parker and D. G. Dalgleish . . . 79

The theory of branching processes applied to milk proteins. I. Heat-induced coagulation of whole milk. T. G. Parker and D. G. Dalgleish . . 85

Water vapour sorption properties of dried milk baby foods. N. N. Varshney and T. P. Ojha 93

Thermal conductivity of creams. F. Fernandez-Martín and F. Montes . 103

Changes during storage in stability and composition of ultra-heat-treated aseptically-packed cream of 18% fat content. M. Anderson, B. E. Brooker, T. E. Cawston and G. C. Cheeseman 111

Quantitative analysis of food products by pulsed nuclear magnetic resonance. II. Simultaneous analysis of water and fat in milk powder and cottage cheese. R. E. Hester and D. E. C. Quine 125

PAGE

The presence of thyroxine in bovine precolostrum and colostrum. T. GREGA and S. BOBEK 131

The thickness and refractive index of milk-fat globule membrane as determined by ellipsometry. K. R. LANGLEY 133

Formation of acetaldehyde from 2-deoxy-D-ribose-5-phosphate by lactic acid bacteria. G. J. LEES and G. R. JAGO 139

Gelation of ultra-high-temperature-sterilized milk by proteases from a strain of *Pseudomonas fluorescens* isolated from raw milk. B. A. LAW, A. T. ANDREWS and M. E. SHARPE 145

The microbiology of pickled cheese during manufacture and maturation. Y. YANAI, B. ROSEN, A. PINSKY and D. SKLAN 149

Effect of fruit on growth of *Lactobacillus bulgaricus* and *Streptococcus thermophilus*. P. THORNHILL and T. M. COGAN 155

Review of the progress of Dairy Science: milk coagulants. M. L. GREEN . 159

No. 2 (June 1977)

Obituary: Emeritus Professor H. D. Kay, C.B.E. Ph.D. (Cantab), D.Sc. (Manchester), F.R.S. 191

Estimation of the prevalence of udder infection in dairy herds based on a single-quarter sample from each cow in the dairy herd. G. P. Y. CLARKE and J. OLIVER 195

The concentration of lactate in relation to other components of bovine mammary secretion during premature regression and after resumption of milking. R. I. MACKIE, W. H. GIESECKE, H. LÜCK and P. A. DE VILLIERS 201

An improved method for the quantitative fractionation of casein mixtures using ion-exchange chromatography. D. T. DAVIES and A. J. R. LAW 213

Progressive changes in individual milk protein concentrations associated with high somatic cell counts. M. ANDERSON and A. T. ANDREWS . . . 223

Kinetics of the heat-induced aggregation of milk protein. J. C. D. WHITE and A. W. M. SWEETSUR 237

Effect of urea on the heat coagulation of the caseinate complex in skim-milk. D. D. MUIR and A. W. M. SWEETSUR 249

Chemical changes in ultra-heat-treated milk during storage. I. Hydrolysis of casein by incubation with pronase and peptidase mixture. A. B. MÖLLER, A. T. ANDREWS and G. C. CHEESEMAN 259

Chemical changes in ultra-heat-treated milk during storage. II. Lactuloselysine and fructoselysine formation by the Maillard reaction. A. B. MÖLLER, A. T. ANDREWS and G. C. CHEESEMAN 267

PAGE

Chemical changes in ultra-heat-treated milk during storage. III. Methods for the estimation of lysine and sugar-lysine derivatives formed by the Maillard reaction. A. B. Möller, A. T. Andrews and G. C. Cheeseman 277

Properties of aseptically packed ultra-heat-treated milk. Electron microscopic examination of changes occurring during storage. A. T. Andrews, B. E. Brooker and D. G. Hobbs 283

An examination of the factors affecting the reserve osmosis of milk with special reference to deposit formation. P. J. Skudder, F. A. Glover and M. L. Green 293

Dipeptide utilization by starter streptococci. B. A. Law 309

Selective denaturation of milk coagulants in 5 M-urea. D. M. Mulvihill and P. F. Fox 319

Seasonal variations of copper and iron in Irish milk and butter. J. J. Murphy, D. R. Headon and W. K. Downey 325

Denaturation of porcine pepsin during Cheddar cheese manufacture. A. M. O'Keefe, P. E. Fox and C. Daly 335

Electrical conductivity of milk from goats of the Beetal breed. G. S. Sharma and N. K. Roy 345

Inverse relationship between the electrolyte concentration and the content of fat, protein, and lactose in the normal milks of individual cows from the same herd. M. Oshima and H. Fuse 347

Effect of sulphydryl-blocking agents on the primary phase of chymosin action on heated casein micelles and heated milk. S. I. Shalabi and J. V. Wheelock 351

Cheddar cheese aroma – the effect of selectively removing specific classes of compounds from cheese headspace. D. J. Manning and J. C. Price . 357

Observations on the primary phase of milk coagulation by rennet under standardized conditions. Kl. Guthy and G. Novak 363

Effect of heat on α-lactalbumin and β-lactoglobulin. A. A. Elfagm and J. V. Wheelock 367

A simple method for the isolation of a phosphopeptide from bovine α_{s1}-casein. D. W. West 373

Micro-determination of lead and cadmium in pasteurized market milks by flameless atomic absorption spectroscopy using a base digest. P. J. Barlow 377

Reviews of the progress of Dairy Science: bovine salmonellosis. C. Wray and W. J. Sojka 383

No. 3 (October 1977)

PAGE

Effect of thiocyanate on mammary gland growth in rats. H. PYSKA . . 427

Mammary blood flow during experimental *Escherichia coli* endotoxin induced mastitis in goats and cows. G. DHONDT, C. BURVENICH and G. PEETERS . 433

Metabolic pathways of cytoplasmic droplets from freshly secreted goat's milk. R. G. VERNON and W. W. CHRISTIE 441

The composition of whole casein from the milk of Ayrshire cows. D. T. DAVIES and A. J. R. LAW 447

The caseins of buffalo milk. F. ADDEO, J.-C. MERCIER and B. RIBADEAU-DUMAS 455

Fractionation and characterization of the membranes from bovine milk fat globules. B. J. KITCHEN 469

Milk-fat globule membranes: chemical composition and phosphoesterase activities during lactation. T. DIAZ-MAURIÑO and M. NIETO . . . 483

The oxidation of lipids by components of bovine milk-fat globule membrane. J. C. ALLEN and C. HUMPHRIES 495

A calorimetric study of the thermal denaturation of whey proteins in simulated milk ultrafiltrate. M. RÜEGG, U. MOOR and B. BLANC . . . 509

The acceleration by cationic materials of the coagulation of casein micelles by rennet. M. L. GREEN and R. J. MARSHALL 521

Proteolysis of α_{s1}-casein by chymosin: influence of pH and urea. D. M. MULVIHILL and P. F. FOX 533

Hydrolysis of lactose in milk and whey with minute amounts of lactase. A. DAHLQVIST, N.-G. ASP, A. BURVALL and H. RAUSING . . . 541

Nutritional value of lactose-hydrolysed milk: protein quality after some industrial processes. A. BURVALL, N.-G. ASP, A. DAHLQVIST and R. ÖSTE 549

The role of various milk fractions and the importance of somatic cells in the formation of germinant(s) for *Bacillus cereus* when milk is pasteurized. F. L. DAVIES 555

Some factors involved in milk lipase activation by agitation. H. C. DEETH and C. H. FITZ-GERALD 569

The relationship between herd bulk milk composition and cell count in commercial dairy herds. C. B. ASBY, R. P. GARD and J. H. WATKINS . . 585

The effect of intergroup movement of dairy cows on bulk-milk somatic cell numbers. S. J. KAY, K. A. COLLIS, J. C. ANDERSON and A. J. GRANT 589

The isolation and bacteriostatic properties of lactoferrin from bovine milk whey. B. A. LAW and B. REITER 595

PAGE

The determination of short- and long-chain free fatty acids in milk. A. M. A. Salih, M. Anderson and B. Tuckley 601

The proteins and salts of some non-bovine milks. P. O'Connor and P. F. Fox 607

Rigidity modulus as a factor influencing the syneresis of renneted milk gels. J. Lelievre 611

Evaluation of some coated titanium electrodes for measurements of conductivity of milk and milk products. J. H. Prentice 615

Chromatography of milk proteins on hydroxyapatite. W. J. Donnelly . 621

Reviews of the progress of Dairy Science: the heat stability of milk. P. F. Fox and P. A. Morrissey 627

Index of Subjects

Abomasum, enzyme secretion, age, dietary protein, weaning, influence, calves, 9
Acetaldehyde, from 2-deoxyribose-5-phosphate, lactic acid bacteria, 139
Age, enzyme secretion, abomasum, calves, 9
Aroma, Cheddar cheese, effect of removing compounds from headspace, 357

Bacillus cereus, germinant, somatic cells, milk, relationship, 555
Bacteria, detection, mammary gland, large experiments, 25
Blood, composition, fertility, relationship, 1
Buffalo(es), milk, caseins, 455
  κ-casein, fractionation, 63
Butter, *see also* **Milk fat**
  Irish, copper, iron, contamination, 325
Butterfat, *see* **Milk fat**

Cadmium, milk, determination, atomic absorption spectroscopy, 377
Casein, micelles, heated, rennin, action, effect of sulphydryl-blocking agents, 351
    rennet, action, acceleration by cationic materials, 521
  mixtures, fractionation, chromatography, 213
  UHT milk, stored, enzymic hydrolysis, 259, 267, 277
    micelles, changes, electron microscopic study, 283
  whole, composition, milk, buffalo, 455
    cow, 447
α_{s1}-Casein, phosphopeptide, isolated from, 373
  proteolysis, rennin, effect of pH, urea, 533
κ-Casein, fractionation, buffalo's milk, 63
Cell count, germinant formation, *Bacillus cereus,* relationship, pasteurization, 555
  intergroup movement, cows, effect of, 589
  milk composition, relationship, 585
Cheddar cheese, aroma, effect of removing compounds from headspace, 357
  production, porcine pepsin, denaturation, 335
Cheesemaking – *see also* **Cheddar cheese**
  coagulants (review), 159
  pickled cheese, microbiological changes, 149
  starter, *see* **Starters**
Cheese ripening, pickled cheese, microbiological changes, 149
Chromatography, hydroxyapatite, milk proteins, 621
Chymosin, *see* **Rennin**
Coagulation, coagulants, denaturation, 5 M-urea, 319
    (review), 159
  milk proteins, heated, kinetics, 237
    (review), 627
    theory of branching processes, 79, 85
    urea content of milk, influence, 249
  rennet, standardized conditions, 363
Concentration, milk, reverse osmosis, factors affecting, 293
Conductivity, milk, milk products, measurement, coated titanium electrodes, 615
Copper, contamination, Irish-milk, -butter, 325
Cottage cheese, water-, fat-content, nuclear magnetic resonance technique, 125
Cream, homogenized, UHT, aseptically-packed, changes, storage, 111
  thermal conductivity, 103

Dairy products, *see also individual products*
  conductivity, measurement, coated titanium electrodes, 615
  quantitative analysis, nuclear magnetic resonance technique, 125
2-Deoxyribose-5-phosphate, precursor of acetaldehyde, lactic acid bacteria, 139
Diet, protein type, enzyme secretion, abomasum, calves, 9
Dipeptide, utilization, starters, 309
Diseases, *see* **Mastitis, Salmonellosis**
Dried milk, baby foods, water vapour sorption, 93
  water-, fat-content, nuclear magnetic resonance technique, 125

Enzymes, *see also* **Lactase, Lipase, Pepsin, Peptidase, Pronase, Proteases, Rennet, Rennin**
  milk-clotting, bovine rennets, 85
    isoelectric focusing, 69
    (review), 159
Escherichia coli, endotoxin mastitis, mammary blood flow, 433

Fatty acids, determination, milk, 601
Fertility, blood composition, relationship, 1
Fructoselysine, formation, UHT milk, stored, 267
Fruit purées, stimulation, growth, *Lactobacillus bulgaricus, Streptococcus thermophilus,* 155

Gelation, UHT milk, proteases, *Pseudomonas fluorescens,* 145
Goat(s), milk, cytoplasmic droplets, metabolic pathways, 441
    electrical conductivity, 345
    -yield, -composition, Nigeria, 57

Heat stability, *see* **Coagulation,** milk proteins, heated
Heat treatment, *see also* **Pasteurization** *and* **Sterilization**
  milk, α-lactalbumin, β-lactoglobulin, effect on, 367
    rennin action, effect of sulphydryl-blocking agents, 351
  simulated milk ultrafiltrate, denaturation, whey proteins, 509

Hormones, *see* **Thyroxine**
Hydroxyapatite, chromatographic medium, milk proteins, 621

Infant feeding, dried milk, water vapour sorption, 93
Iron, contamination, Irish-milk, -butter, 325

Kay, H. D., obituary, 191

α-Lactalbumin, *see also* **Whey proteins**
in milk, effect of heat, 367
Lactase, milk lactose, hydrolysis, 541, 549
Lactate, concentration, mammary secretion, 201
Lactation, stage, milk-fat globule membrane, chemical composition, phosphoesterase activities, 483
Lactic acid bacteria, acetaldehyde formed, from 2-deoxyribose-5-phosphate, 139
Lactobacillus bulgaricus, growth, stimulation, fruit purées, 155
Lactoferrin, milk whey, isolation, properties, 595
β-Lactoglobulin, *see also* **Whey proteins**
in milk, effect of heat, 367
Lactose, milk, electrolyte concentration, inverse relationship, 347
hydrolysis, lactase, 541
nutritional protein quality, 549
Lactuloselysine, formation, UHT milk, stored, 267
Lead, milk, determination, atomic absorption spectroscopy, 377
Lipase, activation, milk, agitation, 569
Lipid(s), metabolism, study, cytoplasmic droplets, goat's milk, 441
oxidation, milk-fat globule membrane, 495
Lipolysis, lipase activation, by agitation, 569
Lysine, sugar-lysine, estimation, UHT milk, stored, 277

Maillard reaction, UHT milk, stored, 267, 277
Mammary gland, blood flow, *Escherichia coli* endotoxin mastitis, 433
infection, detection, large experiments, 25
single-quarter sampling, 195
milk proteins, changes, 223
lactate concentration, premature regression, resumption of milking, 201
rats, effect of thiocyanate, 427
Mastitis, *Escherichia coli* endotoxin induced, mammary blood flow, 433
Milk, cell count, germinant formation, *Bacillus cereus,* relationship, pasteurization, 555
intergroup movement, cows, effect of, 589
coagulation, *see* **Coagulation**
concentration, reverse osmosis, factors affecting, 293
conductivity, measurement, coated titanium electrodes, 615
contamination, lead, cadmium, determination, atomic absorption spectroscopy, 377
goat, cytoplasmic droplets, metabolic pathways, 441
electrical conductivity, 345
heated, α-lactalbumin, β-lactoglobulin, effect on, 367
rennin action, effect of sulphydryl-blocking agents, 351
Irish, copper, iron, contamination, 325
lactose-hydrolysed, nutritional protein quality, 549
lipase activation, by agitation, 569
rennet, action, primary phase, standardized conditions, 363
UHT sterilization, changes, storage, 259, 267, 277, 283
proteases, gelation, 145
Milk composition, cell count, relationship, 585
electrolyte concentration, inverse relationship, 347
goat, Nigeria, 57
non-bovine, proteins, salts, 607
thyroxine content, 131
UHT sterilized, stored, 259, 267, 277, 283
Milk fat, breakdown, *see* **Lipolysis**
electrolyte concentration, inverse relationship, 347
free fatty acids, determination, 601
globule, changes, UHT milk, stored, electron microscopic study, 283
membrane, chemical composition, phosphoesterase activities, lactation, 483
fractionation, 469
lipids, oxidation, 495
thickness, refractive index, 133
Milk Powder, *see* **Dried milk**
